Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 September 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☒ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Allowable Subject Matter

2. Claims 1-34 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

As claims 1 and 18, the prior arts fails to disclose a method and a network element comprising when the network element is not the termination node of the communication link, determining an optimal path for the communication link via a plurality of network elements of the communication network based on the link protection criteria; determining type of path to an adjacent one of the plurality of network elements based on link coupling protocol of coupling to the adjacent one of the plurality of network elements; and processing the link command based on the type of path to the adjacent one of the plurality of network elements within a structure of the claims.

As claims 1 and 18, the prior arts fails to disclose a method and a network element comprising determining whether the link command is a network manager link command or a

network element link command, wherein the link command identifies at least one of a first port and a second port of a communication link; when the link command is a network manager link command: determining type of the link command; when the type of the link command is an establish a connection command: determining an optimal path for the communication link via a plurality of network elements of the communication network in accordance with the link protection criteria; determining type of path to an adjacent one of the plurality of network elements based on link coupling protocol of coupling to the adjacent one of the plurality of network elements; and processing the link command based on the type of path to the adjacent one of the plurality of network elements within a structure of the claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Uematsu (USP 6785224) discloses a method and system for performing topology construction for ring by circulating topology data through the nodes and collecting connection information of the nodes.

Falkenstein (US 20020080445) discloses a method and system for allowing a user to provision the behavior and report the results of path level signal monitoring and of path level protection switching.

Hillard (USP 6765880) discloses a method and system for eliminating the unprotected paths from the protectable shortest path tree.

Art Unit: 2665

Mansingh (USP 6751660) discloses a NMS for managing the network by receiving cross connection and other information from the nodes.

Phelps (U 20020118636) discloses a method and system for establishing a protected path between the nodes after detecting a failure link.

Lu (USP 5412652) discloses a method and system for managing the network by transmitting a ring table containing the working and protected channels for BLSR and UPSR to each node.

Grover (USP 6819662) discloses a method and system for protecting a network.

Szviatovszki (US 20020141345) discloses a method and system for establishing a shortest path between first and second nodes based on the priority level of the request message.

Magill (USP 6606297) discloses a method and system for allocating a minimum spare bandwidth and corresponding admission control.
